

TSC Biosample Repository and Natural History Database

Needed: Participants with tuberous sclerosis complex of all ages

WHAT: The purpose of this project is to accelerate research on TSC biology and drug development with the long-term goal of improved clinical care. We aim to do this by collecting information about people with TSC over their lifetime and collecting biosamples from people with TSC.

DETAILS: The TS Alliance will coordinate a time for a person trained and licensed to draw blood to come collect a sample at your home.

- Medical records will need to be sent to the TS Alliance. Compensation will be available to cover shipping costs.
